

Press Release

Arelion launches built-in SecureConnect DDoS mitigation solutions for enterprise and wholesale customers amid rising AI threats

Stockholm, October 16, 2025 – [Arelion](#) today announced the release of its SecureConnect Dedicated Internet Access (DIA) and SecureConnect Transit solutions, providing automated DDoS mitigation to enterprise and wholesale customers. These products are bundled into Arelion's global connectivity services, including [IP Transit](#) and [DIA](#), making them simple add-ons for any IP or DIA customer. SecureConnect strengthens frontline security as AI-enabled network attacks increasingly target automotive, manufacturing, financial services and other critical industries, and the suppliers to those industries.

SecureConnect automatically detects common DDoS attack types, especially volumetric threats, then uses the Flowspec protocol to stop attacks at the network edge. This functionality provides Arelion's customers with more granular DDoS mitigation than brute-force defenses, such as blackholing, without adding implementation complexity. SecureConnect can also improve companies' chances of meeting International Organization for Standardization (ISO) certification requirements without major investment. With edge-based Flowspec defenses in SecureConnect and global scrubbing centers across Europe, the Americas and Asia strengthening its full DDoS mitigation service, Arelion protects customers against today's increasingly weaponized internet, giving them greater confidence in their global connectivity evolution.

SecureConnect addresses rising risks across global networks, helping enterprises block AI-enabled threats that attempt to overwhelm defenses with smaller, higher-frequency attacks. Arelion's network data shows that the [average volumetric attack size increased by 97 percent from 2023 to 2024](#), reflecting attackers' ability to leverage greater available capacities year-on-year. Another report shows that over [50 percent of automotive and manufacturing leaders see cybersecurity as their top network challenge](#), recognizing that AI-enabled threats facilitate an endless cycle of attack and defense.

"As AI reshapes the DDoS battleground, we remain committed to keeping our customers' businesses connected and protected while reducing implementation complexity. SecureConnect enables companies to stem the onslaught of opportunistic attacks so common in today's connectivity ecosystem," said Johan Ottosson, VP of Strategy and Product Management at Arelion. "These solutions support our customers by leveraging best-of-breed network security functionality and automation to reduce risk, fortify defenses and maintain global operations through resilient connectivity."

"By bundling our SecureConnect solution into our global connectivity services, we can provide all Arelion customers with a reliable option for strengthening network security amid rising AI-enabled cyberattacks," said Scott Nichols, Chief Commercial Officer at Arelion. "This product enhances flexibility

and resilience to safeguard the network underlay, reflecting our longstanding commitment to providing reliable connectivity that is crucial to global economies.”

About Arelion

Arelion solves global connectivity challenges for multinational enterprises whose businesses rely on digital infrastructure. On top of the world’s #1 ranked IP backbone and a unique ecosystem of cloud and network service providers, we provide an award-winning customer experience to customers in close to 130 countries worldwide. Our global internet services connect more than 700 cloud, security and content providers with low latency. For further resilience, our private Cloud Connect service connects directly to Amazon Web Services, Microsoft Azure, Google Cloud, IBM Cloud and Oracle cloud across North America, Europe and Asia. Discover more at [Arelion.com](#), and follow us on [LinkedIn](#) and [X](#).
