

Press Release

Arelion and Gold Data Partner to Strengthen Connectivity in Mexico

Sunrise, Florida and Stockholm, April 24, 2025 – [Arelion](#) and [Gold Data](#) today announced a strategic partnership to leverage dark fiber infrastructure in connecting Arelion's Point-of-Presence (PoP) at KIO Networks' [MEX 5](#) data center in Tultitlán, Mexico, with its POP at [KIO Networks' QRO1](#) data center in Querétaro, Mexico. This collaboration underscores the companies' commitment to supporting Latin America's economic growth through high-capacity, low-latency connectivity. The route is a completely underground fiber construction, allowing Arelion to provide high-availability, resilient connectivity services through Gold Data's high-performance infrastructure.

Gold Data's dark fiber route will be integrated into Arelion's existing network, providing enhanced diversity for wholesale and enterprise customers operating between these key data centers. Arelion's Querétaro Points-of-Presence (PoPs) also serve as centralized hubs supporting access to content and applications for customers in Guadalajara, San Luis Potosí and Mérida.

Gold Data brings local expertise to this partnership through its extensive fiber-optic network across Latin America. Its collaboration with Arelion bolsters Mexico's booming cloud, information communications technology (ICT) and manufacturing sectors through reliable, high-speed connectivity services and digital transformation. By strengthening diverse connectivity between KIO MEX 5 and KIO QRO1, Arelion and Gold Data are poised to meet Mexico's demand for robust, scalable network solutions. This collaboration enhances service resilience in the region and advances the country's position as a leading digital hub in Latin America.

This partnership provides Arelion's customers in the region with enhanced access to Arelion's #1 ranked global Internet backbone, as well as Arelion's portfolio of reliable, fully diverse connectivity services, including scalable [IP Transit](#), [Wavelengths](#), [Dedicated Internet Access \(DIA\)](#), [Cloud Connect](#), [Global 40G Ethernet Virtual Circuit \(VC\)](#) and [DDoS Mitigation](#) services for service providers, content providers and enterprises.

About Gold Data

Gold Data is a premier Latin American network provider, specializing in delivering high-quality connectivity solutions across the region. With an extensive fiber-optic network and a focus on innovation, Gold Data supports enterprises and service providers in achieving seamless and reliable communications.
